

# Newsletter 2.11

**In 2011, Baden-Württemberg became a green stronghold. Our solar control glass for the Höhenblick Rehabilitation Clinic was green long before that.**

The Höhenblick Rehabilitation Clinic, which specialises in treating musculoskeletal disorders, is located 219 metres above sea level, close to the famous spa town of Baden-Baden. We were commissioned to supply neutral and green-coloured solar control glass panes for a three-storey construction on this site.

**We are night owls. Particularly when we can picture the results.**

How do you manage to manufacture 1,397 square metres of special glass in just eight weeks? And how do you also make sure these meet the high requirements of the architects? It's only possible if you understand your craft and are always available when required, including nights. Our project for the Rathaus Galerie in Essen is proof of exactly what you can do if you always keep your eyes open.

## Employees help Japan!

Over 7,000 people died in the tsunami in Japan and more than 11,000 are still missed. Our employees collected about 600 Euro to help the victims and their families.

**We don't like advantages to be thin on the ground. Except when they're made of glass.**

Imagine that a railway company wants to make its double-decker trains safer but doesn't want to use robust and chunky guard rails. This is what happened with Swiss Railways. From 2011 onwards, they decided to use a new style of floor-to-ceiling glass. Although this glass is extremely thin, it is extremely strong and amply showcases the strengths of FLACHGLAS Wernberg.
